

## Search & Rescue

The time is ticking! A plane has just crashed on the Carton Estate. Before it crashed the pilot managed to successfully bail out. The pilot is now believed to be injured and unable to move; he is now lying injured somewhere on the estate. The plane had a 'live' nuclear device on board. The pilot managed to parachute out of the plane just before the crash.

The good news is that the nuclear device has not detonated yet. However its timer has been started. The team has only limited time before the bomb explodes. Teams must recover the pilot and deactivate the nuclear device within that time! Using a compass & booklet the teams must spread out and commence the Search & Rescue using the limited information they have. It is not a head-to-head challenge. Teams will work together to achieve the common goal. The entire group of participants will be successful only on completion of all tasks, challenges, navigation, saving the pilot and safely deactivating the bomb. Participants are on foot for the duration of the mission.

### Fact File:

**Numbers:** 25+ participants

**Duration:** 2 Hours

**Additional Information:** Teams are provided with all the information they need to commence the challenge in a briefing at base camp. Distance covered on foot is 5.5 kilometres between the two teams. (50 minutes walking per team)

**Benefits:** Group co-operation is a must. Provides high energy and amusement throughout the group!
